

# Why are blade batteries produced in Gambia

What is blade battery?

Blade Battery can change the size of the battery pack in the X and Y directions according to the vehicle space, and develop batteries of different specifications. This platform-based battery effectively reduces development costs and time. Its patent shows that there are at least 8 types of blade battery solutions.

How does a blade battery work?

The high-voltage wiring harness and sensors of the blade battery are in the Y direction of the battery cell. Therefore, the upper box can be in direct contact with the battery core. This allows the blade battery to save 10~20mm in height compared to batteries of the same specification.

Why do we need blade batteries?

Blade batteries cannot achieve higher energy density in battery materials, but they have made breakthroughs in battery system integration. This solves the shortcomings of short battery life of lithium iron phosphate batteries. This is the background for the birth of blade batteries. Part 3. BYD blade battery specifications Part 4.

Why is a blade battery better than a battery core?

Because the blade battery has a larger heat dissipation surface and a thin thickness, the blade battery core has better heat dissipation performance. From the data released by BYD's blade battery patent, we can see the temperature simulation results of battery cells with different thicknesses inside the blade battery.

What is a BYD blade battery?

The blade battery was officially launched by BYD in 2020. BYD claims that compared with ternary lithium batteries and traditional lithium iron phosphate batteries, the blade battery holds advantages in safety, range, longevity, strength and power.

What is the difference between a lithium ion and a blade battery?

The Blade Battery has a higher energy density than traditional lithium-ion batteries. It can provide a driving range of up to 600 kilometers on a single charge. The Blade Battery also meters. The Blade Battery is more thermally stable than traditional lithium-ion batteries and has a lower risk of catching fire.
