

What is solenoid valve voltage?

Solenoid valve voltage is the electrical voltage needed to energize the solenoid valve coil, creating a magnetic field that moves a plunger or armature to open or close the valve. Solenoid valve coils are available in various voltage ratings; these ratings must match the power supply to ensure proper functionality and longevity.

What is the minimum working voltage for a solenoid coil?

For solenoid valve coils, there is typically a working voltage range of  $\pm 10\%$  of the rated voltage. For example, if the rated voltage is AC 220V, the minimum working voltage would be approximately 198V AC. Using a voltage that is too low can cause several issues:

What is the actuation voltage of a solenoid valve?

Every solenoid valve has a nominal actuation voltage, which is usually based on common power supply voltages such as 12 VDC, 24 VDC, 110 VAC, or 220 VAC. The nominal voltage is typically printed somewhere on the valve body or coil and is the voltage required to actuate (shift) the valve.

Do solenoid valve coils have different voltage ratings?

Solenoid valve coils are available in various voltage ratings; these ratings must match the power supply to ensure proper functionality and longevity. It is crucial to consider what happens when using voltages of different ratings, as mismatched voltages can lead to performance issues or damage.

How does a pilot operated solenoid valve work?

Control of the solenoid is performed by permanent magnets instead of a spring mechanism, reducing power consumption. Pilot-operated Solenoid Valves use the energy stored in the build-up of pressurised fluid or gas to power the valve's opening or closing and are either internal or external piloted.

What factors affect a solenoid valve's flow rate?

**Media Compatibility** - Whenever a valve is used with water, air, steam, oil, or a specific type of media, the valve's construction material must be compatible. **Operating Pressure** - This affects a solenoid valve's total flow rate the most; for best performance it needs to be balanced with the needs of the system.
